

Declared proposition

$s = \text{pump-A}$

$q = \text{pressure}, \quad u = \text{kPa}$

$\sigma = \text{trial-v1}$

$I = [t_0, t_1)$

$Q : \text{assignment} = \text{randomised}$

Result conversion: $7500 \text{ Pa} = 7.5 \text{ kPa} \geq 5 \text{ kPa}$

Supplied observation

$s' = \text{pump-A}$

$q' = \text{pressure}, \quad u' = \text{Pa}$

$\sigma' = \text{trial-v1}$

$I' = [t_0, t_1)$

$v : \text{assignment} = \text{randomised}$

Method: `causal/1`
